Why are ICT skills important? Is ICT a sector that is growing?

Nowadays, already 71% of all jobs require some level of digital skills. In the near future, 90% of the jobs will require digital skills, at least on an elementary level. Completely new jobs will be created in areas that nobody knows today. The labour market will change rapidly in the coming years. Meanwhile, about half of the entire European population aged between 16 and 74 do not have basic digital skills.

It is time to add some digital knowledge!

These are the ICT skills that are already needed and will be even more in the future:

Do you want to know how you can cope with the change and how to prepare yourself for the digital job market?

Sign up in the courses provided in your nearest ICT Training Hotspot!

The Erasmus+ project E-DESIGN creates ICT Training Hotspots in social areas or schools of municipalities in your region, where experienced trainers offer free courses to help you improve your digital skills to be ready for the challenges of a changing labour market and enhance your future job opportunities. In the courses, you deal with exciting content such as 3D printing and modelling, programming and Internet of things. You can take part in competitions and realise your own projects.

Do you want to start working on the information and communications technology (ICT) sector altogether?

The courses do not stop at technical skills. There are soft skills, that computers can not easily master and therefore are as equally important for employees. To only name a few:

- *critical thinking and problem-solving*
- *flexibility and creativity*
- *openness and emotional intelligence*
- *communication, collaboration and negotiating*
- *planning and managing*

The ICT Training Hotspots in your area offer **free courses** to help you improve your digital and personal skills.

By participating in them you:

will develop knowledge and skills to create and implement your own ICT based projects and consequently present these in job interviews for your new job;

will develop critical thinking and civic competences;

will feel more motivated for challenges like design thinking and problem solving;

will be more conscious of the European dimension (the chances digital skills arise on the whole European job market) and its demands and benefits for the individual.

will create national and international synergies;

will develop skills to cope with the demands of social inclusion;

will perceive the importance and added value of the digital skills for their future careers as well as facing challenging digital experiences together as a group as opportunities to learn more about each other's cultures and languages;

will develop autonomy;

Keep in touch with your community and stay connected with the world!
